WINDING

First, wind your watch manually (in pos. **0**) by turning the crown clockwise several times. Afterwards, your watch will automatically be wound by every movement of your wrist.

CROWN IN POS. 0: Initial position

CROWN IN POS. 1: Instant adjustment of date (**D**) Turn the crown clockwise until the date hand (**D**) shows the correct date. **Important:** Do not adjust the date between 9 p.m. and 3 a.m. During that period, several complex operations take place and any outside interference may damage the movement.

CROWN IN POS. 2: Exact time setting, standstill of watch (the second hand stops). Turn minute and hour hand until the exact time is set. If the hour hand passes midnight, the date hand jumps one day forth.
